

Since 1991, Fondation OLO has been taking action and offering nutritional support throughout Quebec to help children get a good start in life and come into this world healthy.

Poverty in Quebec

In pregnancy:
Lack money to eat properly and meet the needs of the unborn child
Need skills to adopt life-long healthy eating habits

Negative impacts on the child:

- Overall development
- School success
- Health

The OLO solution: Early action, from pregnancy to family meals

Helping pregnant women eat better for a healthier baby

Working hand in hand with healthcare and social service professionals and community organizations, we offer customized support and direct assistance through prenatal vitamins and coupons that can be exchanged for food (eggs, milk and orange juice).

Guiding parents to establish healthy eating habits for their child from the start

We offer educational tools and professional guidance for parents and workers to encourage families to adopt three sound behaviours: **eating well, cooking and having family meals.**

OLO support is effective and cost-efficient

Risk of a baby being born with a low birthrate reduced by 1.6 times

Cost-effectiveness from birth (savings in hospitalization costs)

Source: Haeck, 2016

Positive impacts on children

Overall health

Eating habits

Parental attachment

Access to care

Optimal development

School success

Our reach in Quebec

600,000 food coupons distributed per year
